## PART V – LIQUIDITY RATIO

	Oct 31, 2018	Oct 31, 2017
The average liquidity maintenance ratio (“LMR”) for the financial period of Nov17 to Oct18	74.67%	
The average liquidity maintenance ratio (“LMR”) for the financial period of Nov16 to Oct17		109.17%

### Liquidity Risk Management:

Liquidity risk is the risk of having insufficient cash or its equivalent in a timely and cost-effective manner to meet financial obligations as they come due.

CIBC’s liquidity risk tolerance is defined by the risk appetite statement (RAS), which is approved annually by the Board.

The Asia Pacific RAS, unique to the region within which CIBC Hong Kong Branch operates, articulates the aggregate levels of risk that the Asia-Pacific Region is willing to assume in pursuit of its strategy and business objectives and sets the basic goals and measurement metrics, which define tolerance levels for various risks. A Contingency Funding Plan (CFP) is reviewed and approved regularly by the Asia Pacific Management Committee.

In the Asia-Pacific Region Treasury, Finance and Risk Management staffs manage liquidity requirements in accordance with local regulation and internal policies, following the three lines of defense model with independent assessment of the design and operating effectiveness of liquidity risk management controls, processes and systems.

### Liquidity Risk Monitoring and Reporting

The Liquidity Maintenance Ratio (LMR) is monitored on a daily basis, against regulatory limits (25%) and internal buffer targets. A two day liquidity projection is prepared.

A control has been established to ensure that LMR adequacy is maintained, whereby Finance personnel produce the LMR projection, based on status quo reporting. This projection is validated by Treasury (Funding & Liquidity Management, FLM) staff and then adjusted with cash flows arising from new transactions, to derive the updated daily LMR. On the following day, the Finance team produces the LMR report and FLM validate that the two reports reconcile. The daily LMR is also sent to Capital Market Risk Management and other Global Treasury colleagues for review and monitoring.

Local funding considerations are incorporated into CIBC’s consolidated liquidity stress testing paradigm, as appropriate, but stress testing is not performed regionally; instead this is considered holistically at the parent bank level.
